Discussions and Conclusion

As we can see from the above evaluation that there are certain neighborhoods which could be more appealing to student 'A' but also expensive. However if cost to benefit analysis is done on the neighborhoods in Barcelona it can easily be seen El Raval is one the most happening and cool places to live for a cheap price on rent.

I conclude that this recommendation system is an addon to all the home rent search engines and better graphs and analysis could be added in future to provide better customer experience, which is missing in most home search apps
